RG104 E-1 Box 136 Oct-Dec 1885

Mint of the United States at Philadelphia,
MELTING AND REFINING DEPARTMENT,

Philadelphia, 9th October —, 1885.

Sir,

There are two machines in my sweep-cellar, utterly useless to me, and I am desirous of employing their vacated space by a simple Steam-tub, for cleansing the Sleeves and aprons of my men for further use, and thereby saving grains of gold and silver entangled in the fibre.

The sifting screen, for separating and assorting ground sweep, is wholly inferior in efficacy, in time, and in economy, to our present simple method. I know of no other use that it can be applied to. I recommend its public sale.

The other machine is an Erickson Hot-air Engine, put into one of the wells in my cellar, to pump out water, without consulting me in relation to it, by Mr. Maginnis. It is wholly

useless for our purposes. I think that it might bring a fair price at Public Sale.

Very respectfully

I. A. C. Booth

M. S. R.

Hon. Dan. M. Fox

Superintendent U.S. Mint
